OBJECTIVE

B.Tech CSE (AI/ML) student with hands-on experience building Generative AI applications using Python, LangChain, and the Google Gemini API. Seeking an AI/ML or Software Engineering internship to apply and expand my skills in machine learning, API integration, and software development. Driven by a long-term vision of becoming an AI Engineer within the next three years, I am actively working toward mastering AI/ML technologies, developing production-ready GenAI solutions, gaining practical industry experience, and contributing to innovative, real-world AI applications.

EDUCATION

B. Tech in Computer Science — AI/ML Specialization

2025 – Present

ABES Engineering College, Ghaziabad, Uttar Pradesh

Diploma in Electronics Engineering

2022 – 2025

Govt. Polytechnic Ghaziabad, UP | Relevant: Circuit Design, Embedded Systems, Signal Processing

TECHNICAL SKILLS

Languages: Python, C++, HTML5, CSS3, Java Script, SQL

AI/ML & GenAI: Lang Chain, Google Gemini API, Prompt Engineering, Conversational AI, API Integration

Core CS: Data Structures & Algorithms (DSA), Object-Oriented Programming, Computer Networks

Tools: Git, GitHub, VS Code, Speech Recognition, pyttsx3

PROJECTS

AI Chatbot | Python · Lang Chain · Google Gemini API

- Engineered a context-aware conversational AI chatbot using Lang Chain and Google Gemini API, supporting multi-turn dialogue with persistent memory across sessions.
- Designed reusable prompt templates and a modular chain architecture, reducing response latency and enabling flexible deployment across multiple use cases.
- Demonstrated practical GenAI application of LLM APIs, producing a production-ready prototype aligned with real-world chatbot workflows.

Voice-Controlled Virtual Assistant | Python · Speech Recognition · pyttsx3

- Built a Python-based voice assistant that processes real-time speech commands to perform web navigation, media playback, and task automation.
- Implemented a modular, event-driven architecture enabling seamless addition of new voice commands without modifying core logic.
- Optimized speech-to-text pipeline for low-latency command execution by structuring intent parsing into independent, reusable modules.

ACHIEVEMENTS & ACTIVITIES

- Solved 100+ DSA problems across arrays, strings, recursion, and sorting — maintained a 70-day consistent coding streak on competitive coding platforms.
- Independently built 3 AI/software projects before completing Year 1 of B. Tech, demonstrating self-directed learning and applied engineering skills.
- Actively upskilling in Machine Learning, Cybersecurity, and advanced Python through structured online coursework beyond the academic curriculum.
